Jack, Please allow me to show you a few samples. One of these pieces was dated about 19,000 years old and I show ONLY one page of that report. I will share more later of course if you have an interest, but here are a couple of pics and video. Let me know if you have an interest. See attachments

First a few pointers that I learned from these 100s of pieces I have been studying is Mu was the mother culture that built pyramids all over the Earth to keep the planet in harmony and the Aztec/Maya calendar came from them 100s of thousands of years ago. Another point that I learned is the jaguar was sacred in Lemuria culture because it has no predator. Also, in their culture a boy became a man once he captured a gator/croc very much like the Minoians/Early Greek/Italy in Mediterranean cultures the rite of passage into manhood was capturing the bull. In Mu, the ruling race I found was olive skinned but they were a multi galactic and multi racial society/culture; people lived in peace and harmony worldwide until later when Atlantis grew and absorbed Mu and then followed the dark side and of course then the destruction and the rest is history. But no body until now, can show anything about Mu. I just bought your book **Lifting the Veil on the Lost Culture**. This as well as your great grandfather's work is all new to me. But maybe we can collaborate. Two heads are better than one. Like the cuneiform clay tablets showing the documentation, my proof with the artifacts is undeniable. Yes, it is in Mexico, but it is more on the west side and totally different from all the other pieces in Mexico. I have personally seen over 50 crystal skulls and hundreds of pieces similar to the attached here that all come from the same place and I believe the same culture of Mu. Oh, and by the way, every one of them look brand new like it came out of a box from Tiffany's; yet we dug them up from a dry lake bed and they test between 17,000 and 25,000 year old. Let me know what you think of my analysis.

In the best of health for you,

Dr. Johnny

3. Se colocó la muestra en una línea de síntesis de benceno para absorber el carbono y desintegrar el carbono 14.
4. Se colocó en el Espectrómetro, para medir los centelleos producidos cada vez que se desintegra un átomo de carbono 14.
5. Los resultados de los centelleos se compararon contra las tablas de referencia.

Si bien estos equipos no son de última generación, hemos comparado nuestros resultados contra los obtenidos con equipos más modernos, con resultados razonablemente similares.

La datación que obtuvimos para la pieza presentada es de:

18,000 años +/- 1,000 años

Es decir que el cráneo en cuestión debe tener entre 17,000 y 19,000 años de antigüedad.

Sin mas, quedo de usted a la orden para cualquier aclaración sobre el particular.

ATENTAMENTE,
Por mi Raza Hablara el Espiritu
